

WEEK 2 STATUS REPORT

Reporting Period: Week 2 | Submitted by: Muhammad Ahmed (Project Manager)
Date: 02 June 2025 | Team: Muhammad Ahmed, Hamna Rizwan, Eshal Tanveer

1. Team Overview

Member	Role	Contact
Muhammad Ahmed	Network Architect + Project Manager	f2024266974@umt.edu.pk
Hamna Rizwan	Security Engineer + Testing/QA	f2024266956@umt.edu.pk
Eshal Tanveer	Documentation Lead + Automation Lead	f2024266958@umt.edu.pk

2. Work Completed This Week

- Received and verified instructor-provided PCAP file: 2025-06-13-traffic-analysis-exercise.pcap (42 MB, 48,877 packets, 34-minute capture)
- Identified attacker IP: 83.137.149.15 and victim IP: 10.6.13.133 using Wireshark Conversations view
- Confirmed attacker is the top talker: 35,485 packets / 34 MB exchanged with victim
- Applied and documented five Wireshark display filters: ip.src, ip.dst, tcp.port == 443, tcp.flags.syn == 1, and Conversations statistics
- Identified first suspicious packet: Packet #8567 at timestamp 157.661094s (SYN, ACK from 83.137.149.15 to 10.6.13.133 on port 443)
- Classified attack type as large-scale encrypted data exfiltration / C2 beaconing over TLS (port 443)
- Captured and saved all seven annotated Wireshark screenshots as evidence
- Drafted analysis worksheet with all required fields completed
- Began drafting 3-page analysis report (methodology section complete)
- GitHub repository updated with /wireshark-screenshots/ folder containing all evidence

3. Deliverables Status

Deliverable	Owner	Status	Location
PCAP file received & verified	Hamna Rizwan	✓Done	GitHub & Google Drive
Wireshark filter screenshots (7)	Hamna Rizwan	✓Done	GitHub & Google Drive
Attacker & victim IP identification	Muhammad Ahmed	✓Done	Github & Google Drive
First suspicious packet timestamp	Hamna Rizwan	✓Done	Github & Google Drive
Attack type classification	Muhammad Ahmed	✓Done	Github & Google Drive
Completed analysis worksheet	Muhammad Ahmed	✓Done	Github & Google Drive

3-page analysis report (draft)	Eshal Tanveer	✓ Done	Github & Google Drive
Week 2 Status Report (this doc)	Muhammad Ahmed	✓ Done	Github & Google Drive

4. Key Findings This Week

Finding	Detail
Attacker IP	83.137.149.15
Victim IP	10.6.13.133
Attack Type	Encrypted data exfiltration / C2 beaconing over TLS (port 443)
First Suspicious Packet	Packet #8567 at timestamp 157.661094s — SYN,ACK from attacker on port 443
Volume	35,485 packets / 34 MB transferred between attacker and victim (top conversation)
Protocol	TLSv1.2 / TCP port 443 (85.8% of all traffic)
Mitigation	Block outbound connections from 10.6.13.133 to 83.137.149.15 on port 443 at the perimeter firewall

5. Individual Contributions

Member	Contribution This Week
Muhammad Ahmed	Verified PCAP integrity, led attacker/victim identification, completed analysis worksheet, applied Conversations filter, coordinated team meetings, wrote Week 2 status report, submitted all docs to LMS and GitHub
Hamna Rizwan	Performed all Wireshark filtering (ip.src, ip.dst, tcp.port==443, tcp.flags.syn==1), captured and saved all 7 screenshots, identified first suspicious packet timestamp, annotated key evidence in screenshots
Eshal Tanveer	Drafted analysis report (methodology and findings sections), organized GitHub /wireshark-screenshots/ folder, updated Google Drive with all Week 2 evidence, prepared attack classification justification

6. Issues & Blockers

Issue	Severity	Resolution / Plan
3-page report not yet fully complete	Low	Methodology section done. Conclusions and mitigation section to be finalized by Eshal Tanveer before end of Week 2.
No other blockers at this time	—	—

7. Plan for Week 3

- Finalize and submit the 3-page analysis report with full methodology and mitigation recommendation
- Complete screenshot annotation with labeled arrows and callouts highlighting key evidence
- Begin Week 3 deliverables: L2 security configs and attack execution as applicable to Problem 6
- Review PCAP further to identify any additional indicators of compromise (IOCs)
- Submit all Week 2 deliverables to LMS before deadline
